

MATICA XID8600

Matica's XID8600 is a premium quality micro printer, perfectly suited for the most demanding ID card programs. It is capable of producing up to 120 single-sided cards per hour, though a double-sided configuration is also available. As a part of Matica's XID Series 8 family, this 600 dpi card printer relies on over-the-edge dye sublimation retransfer technology to achieve top-notch results. The outstanding image quality, high security standards, micro print, as well as its adaptability, make this model the right choice for government, corporate or financial applications.

High-security ID cards, such as national IDs, driver's licenses or employee access cards require extra care to prevent replication and tampering. The XID8600 unit itself comes equipped with diverse standard security features such as an electronic lock, Kensington-lock and IPsec data encryption.
